

AI Student Tutor | For Instructional Designers and Faculty

Study Smarter for Every Exam With Your Own Course Materials

AI Student Tutor generates practice questions, explains the concepts you are stuck on, and runs interactive Study Mode sessions using the actual content from your course. Ask a question, test yourself, and go into the exam prepared.

01 — EXAM READINESS | For Students

Practice questions built from your course, not the internet

Generic flashcard apps and search results give you content that may not match what your instructor is testing. AI Student Tutor reads your actual course materials, including lecture slides, readings, and uploaded files, and generates questions grounded in that content. What you practice is what your exam is built from.

02 — LEARNING SUPPORT | For Learners

Stuck on a concept at 11pm? Get an explanation, not a search result

Office hours are closed. The textbook explanation is not clicking. AI Student Tutor can break down any concept from your course materials in plain language, walk through a worked example, and answer your follow-up questions, all without telling you the answer to the problem you are supposed to solve yourself.

03 — EFFICIENCY | For the Institution

Students self-study more effectively without adding faculty workload

When students have a reliable way to practice and self-check at any hour, the volume of low-level clarification questions directed at faculty drops. Students arrive at office hours with better-formed questions. Faculty spend their time on discussions that require human judgment, not on re-explaining definitions the tutor already covered.

How to Use It - Steps

1. Enable the AI Tutor and turn on Study Mode

- ◆ In the LearnWise dashboard, enable the AI Tutor for your course and turn on Study Mode. This allows the tutor to present one question at a time and provide feedback after each response.

2. Review knowledge sources and add any additional materials

- ◆ Course content syncs automatically from the LMS. You can choose which content types are included, manually add courses, or upload supplementary PDFs and files directly to the course.

3. Set answering style, integrity guardrails, and entry points

- ◆ Set the tutor to guide students without completing assignments. Configure academic integrity guardrails and choose how students access Study Mode.

4. Students practice, ask questions, and run Study Mode sessions

- ◆ Students can generate practice questions, request explanations, and complete guided Study Mode sessions with active recall and feedback.

How It Works

Your course content becomes a personal study session

Admins enable the AI Tutor, configure Study Mode, and define academic integrity guardrails in the LearnWise dashboard. Course materials sync automatically from the LMS, and additional files can be uploaded manually.

The tutor generates every response directly from course materials and references the source content it uses. Study Mode turns conversations into structured practice sessions with one question at a time and feedback after every response.

The tutor supports learning without completing assignments or violating institutional integrity policies.

What the tutor can do

- Generate practice questions from course materials by topic or week
- Explain concepts and definitions in plain language with examples
- Run Study Mode: one question at a time with feedback after each answer
- Work through calculations and show step-by-step reasoning
- Compare concepts or theories covered in the same course
- Reference the specific source for every answer it gives

Example Prompts

PRACTICE | Generate practice questions from a topic

"I do not understand the difference between preload and afterload. Can you explain both using the example from the Week 8 lecture and then give me a question to check if I got it?"

The tutor explains both concepts using course content, walks through the lecture example, and generates a follow-up question to test understanding.

STUDY MODE | Enter Study Mode for active recall

"Enter Study Mode. Test me on cardiac output, preload, afterload, and Frank-Starling from Weeks 7 and 8. Give me feedback after each answer before moving to the next question."

The tutor presents one question at a time, waits for a response, and provides feedback and explanations after every answer.

EXPLAIN | Get an explanation of a concept you are stuck on

"I do not understand the difference between preload and afterload. Can you explain both using the example from the Week 8 lecture and then give me a question to check if I got it?"

The tutor explains the concepts using course materials, works through the lecture example, and provides a follow-up check question.

FOCUS | Target your weakest topics before the exam

"I have a NURS 301 midterm in two days. I am weakest on fluid and electrolyte balance from Weeks 5 and 6. Give me 10 practice questions on that topic, harder than standard recall."

Returns a focused set of higher-difficulty questions based on the selected topics and lets students continue practicing weaker areas.

Governance Note

You remain in control. Nothing is automated without your approval.

Institutions control academic integrity guardrails and available course materials. The tutor will not complete assignments, provide exam answers, or violate course policies. The tutor only uses content from a student's enrolled courses and does not share conversations, grades, or submissions with instructors.

See it in Action

Book a 20-minute walkthrough. We will load sample induction content and run a new student through the full loop from arrival question to registration step to help desk escalation.
